

Teaching and Learning of Language in Digital Era

Rashika Joshi Gautam

INTRODUCTION

Due to this pandemic we have learnt new processes of learning and understanding the things when we are talking about teaching and learning it requires interventions and innovation. Here intervention means the new methods of learning which are provided by Digital platforms so now we have to change our approach towards learning through the new methods and shifting towards the new avenues which is digital platform. Here intervention is required because the world came to a stop due to pandemic but learning is a continuous process so we need to continue through various means we already know there are so many digital platforms for learning the things. The innovation was done previously but now we are using it due to pandemic, those people who use to be away from the technology and digital platforms they are using these platforms for learning and teaching. It plays an important role for transforming the life now. Teaching is an art, so for executing this art we need to give a proper Execution to the learners. Now we have various means of teaching, mentoring, guiding, training for students those who want to learn language. Through the conventional ways the idea of learning languages is a bit difficult and not so interesting but through this digital platform we have so many things to inculcate the interest for better understanding for the students and learners.

THE ART OF TEACHING

The art of teaching will play an important role with the interventions through the innovation for developing the new verticals of learning. Define the new vertical of learning as different platforms different interface and different learners we can make it more interesting, entertaining, interactive through this we can cater different audience through this, and it is also feasible to learn with better approach. Language plays an important role and a new vertical will give it the New Horizon.

LANGUAGE TRAINING

Language Training was always a tricky question for new learners. It was suspicious and sometime may be wrongly interpreted by the learners because of different accents and diction. Due to wrong interpretation language and its beauty fade away because people lose their interest due to improper training and teaching. The conventional ways always create confusion because of the usage and the grammar part, but the actual zest in the meaning of the sentences and words can be delivered through a proper language teacher or trainer only. Beauty of a language can be carried out by a proper teacher for trainer because we understand the things which are required

in the language through the proper usage of sentences and words with their punctuation. The magic of language can be created by a well trained and well known person who knows the in-depth knowledge of that particular language. Through digital platform we have that kind of teachers and trainers for teaching and guiding those who really want to learn proper and correct language.

DIGITAL ERA

We have already discussed so many new ways of digital education. But there are so many challenges as well, especially in India we have to mention and discuss those things as well. Proper connectivity of internet is still far for many of us. Very few trainers and teachers are capable to train on the digital platforms some of them are still learning and trying to using it properly because it occurred suddenly Indian education system was run through the conventional ways. But now a day's we're trying to adapting the things. We still have the insufficient resources and still not trained for Digital education system.

Now we can use language tools and online interface like artificial intelligence for better understanding of the language also we can use digital platform, proper trainers, mentors, guides and teachers and will be in a better state of understanding of language for the learners.

INTERVENTIONS

The intervention of Technology and artificial intelligence created a virtual way of learning with a better understanding and more visible practices which are required for mastering language. You can be in touch with your teacher, mentor, guide, trainer for it. They are giving you the crux and the rest will be handled by artificial intelligence theory and current digital platforms. For getting maximum out of it the students and the learners can do lots of practice with the use of different platforms and they can learn different things and apt usage of the words.

BEAUTY OF LANGUAGE

Language can be understood by the proper use of words and correct forms of sentences only and diction, accent are equally important for enhancing the beauty of language. We can learn and understand the language by proper teachers and a proper trainers those who have the in-depth knowledge of the language. Different languages required different accent and diction. But we can learn it in a proper manner by taking proper guidance by teaching and proper mentoring. Digital tools can help in a better way of understanding. When we're talking about the constraints, Indian education system is still struggling for basic requirements so how we can provide the digital platform for those learners. Talking about the content and the material of conventional learning we have the resources. But if we're talking about the virtual way of learning, comparatively prices are less, still people are not used it. We need to treat language as a flower, than only it seems to be beautiful. We need to handle it with special care. In the

present scenario we see the beauty of language is totally lost. People just say anything without understand the mean, structure and the usage. This is one of the reasons that the importance of language fade away. Very few people use it correctly and give the proper structure usage and meaning. Those who understand the importance of language and pay proper attention and respect to it.

CONCLUSION

Art of teaching gives us the flexibility and creativity to create and give the knowledge of language in different ways which are easily interpreted by the learners. Connectivity through digital assignments can help in this. Conventional teaching pedagogy transforms into self paced learning. Loving the occupation- If people perform in their jobs one of the reason is to love the job what they do. That is the biggest motivation to perform well and do wonders in it. Self motivation is the best motivation to perform. Every session should be unique- Try to create something unique that will create impact on learners mind. They will never forget the concept, content and example which will guide by you. Give the artistic view and angle- Artistic view can only be inculcated by the teacher, mentor, trainer etc. Because we need to create the way of visualizing and analyzing the things. Simplify the concept- As simple you and do the concept do it. And then explain it in the simple words. Because that is our duty to simplify the concept. Try to delete the concept of learning phobias- we need to help the learner to reduce the learning phobias. Unless we will not do it then it will be difficult to give them proper understanding of the subject. Create curiosity- To create Curiosity is the best way to give and deliver the real concept and content. When the learner feels curious they are more open to learn towards the concept and content. Generate interest- to making something interesting give the penetration of the concept into the minds of learners. Give life experience and examples for better understanding and connectivity. Students should be eager to learn with you- If the learner finds you that you can solve their questions, queries, and confusions he/she will pay you his /her full attention to you and what you are saying. Create an emotional bond- emotional connect will give and create a proper way learning and understanding. We need to create a separate bond with each and every student- every student has their own pace, own way of learning and understanding. So we need to deliver accordingly. That is why it is important. We need to treat it as a performing art- because teaching is an art that is why you need to treat it accordingly. Remember you are creating the future- always be aware of it that we are creating future aspirants. No consideration is there for mistakes, because it will be reflected in near future, so we need to be very conscious about it.
